

Where are tropical cyclones likely to form?

This map shows the areas of ocean that had a Sea Surface Temperature (SST) on 12 September 2018 of 26°C or above.

1. **Label** where you think tropical cyclones would *initially* form at this time of year with an 'X'. Write as many X's as you think you need. Why do you think they'll form in these places?
2. **Draw** on the track (path) that you think tropical cyclones might take from your X's (don't forget to include an arrow to show direction!)
