

'Calculating Sea Level Rise'

No, it doesn't match his claim. First find the percentage increase between 2006 and 2016.

$$\frac{80-40}{40} \times 100 = 100$$

There is a 100% increase.

So between the years 2016 and 2026 the sea level should rise by 100% of 80 mm. $80 \text{ mm} + 80 \text{ mm} = 160 \text{ mm}$ (3)
