Physics review

## Planetary energy budgets

On pp. 11-15 Sylvia Knight compares the energy transfer that takes place in Earth's atmosphere and at its surface with that of other planets and one of Saturn's moons. This issue's At a glance displays the data for these other celestial bodies
| Mars has a dusty surface and very thin atmosphere

2 The Martian energy budget in low-dust conditions

3 The Martian energy budget during major dust storms

4 Venus has such a thick atmosphere that its surface cannot be seen

6 Titan has a dry surface and a relatively deep atmosphere

8 Jupiter is a gas giant planet

5 The energy budget of Venus

7 Titan's energy budget

9 Jupiter's energy budget
