

FUTURE UK HEATWAVES QUIZ

All of the answers to this quiz can be found in lesson one of the Heatwaves Lesson Plan package. You may like to try answering the questions whilst watching the BBC clip linked in the lesson, or perhaps you might take notes during the clip and then try answering the quiz at the end! (Questions are on a separate sheet)

Answers:

1. Scientists think climate change made the 2022 heatwave worse.
2. The temperature that was felt for the very first time in the UK was 40 degrees Celsius.
3. Temperatures in this heatwave were at least 2 degrees Celsius hotter because of climate change.
4. To make sure heatwaves like these remain "rare events" we need to reduce behaviour that emit harmful gases.
5. Scientists are now able to say what caused a specific weather event.
